

Instruction on how to make this program run properly:

Please don't directly download the code of this program from Github. Instead, please clone this project from Github. Or, there will be an issue of dependency.

This program may not run correctly in your first attempt. Please try one or two more times

Description of this program:

This program is about the interactions of two 3D AR characters, a boy and a girl. Using the images included in this project, namely OSU and OU logos, these characters will appear. There will be sound and UI change when these animations appear and disappear. When both of them appear, they will orient to each other, and as they get close enough, they will do certain funny animations. As they get far enough, they will behave idle animations again.
